NOW THEREFORE, in consideration of the mutual covenants contained herein, the parties agree as follows:

1.0 PURPOSE:

The purpose of this MOU is to establish a framework of cooperation between [FACILITY] and Centerstone for the purpose of offering enhanced follow-up services by Centerstone’s Crisis Care Services team to individuals, age 10-65, who, at initial presentation to the Emergency Department ([FACILITY]), have expressed some recent or current suicidal ideation, but whose level of risk at discharge does not justify medical admission or referral to a higher level of care. Additionally the intent of this MOU is to establish confidentiality requirements for Centerstone so that [FACILITY] may share otherwise confidential information with Centerstone about patients discharged from [FACILITY] and participating in the enhanced follow-up program in order to enable such participation.

This MOU also seeks to establish a framework of collaboration and consultation in the assessment and, as applicable, integration of standardized suicide prevention practices in training, screening, service referral and tracking measures.

The purpose of the collaboration between the parties to this MOU is to improve follow-up and continuity of care for individuals discharged from the ED who have had recent or current

suicidal ideation and have been determined to not be an imminent risk to themselves or others and do not warrant medical admission or psychiatric hospitalization. Additionally, it is our mutual goal to reduce the level of risk for those individuals who choose not to be linked to behavioral health care.

The purpose of the enhanced follow-up services is to help and support these individuals during a time in which their suicide risk may be heightened. Centerstone will provide follow-up services for [FACILITY] referrals. Each member of the enhanced follow-up team is trained in crisis assessment and suicide intervention.

2.0 TARGET POPULATION

The target population for this project is persons discharged from the Emergency Department who meet the following criteria:

- Have been assessed as having some level of suicidal risk at discharge from the ED, but at a risk level that has not justified medical hospitalization or psychiatric placement.
- 10-65 years of age.
- Have received an outpatient treatment referral or has an active relationship with an outpatient treatment provider.
- Have agreed to receive follow-up services post discharge through the completion of their first or next appointment with a treatment provider.
- For those that initially refuse mental health or community referrals, have agreed to receive follow-up services post discharge in an effort to provide support and promote engagement in services.

The intended outcomes of this project are to: (1) connect referrals to mental health services (2) promote maintenance in mental health services as applicable (3) to minimize the level of risk for individuals who refuse mental health treatment (4) reduce recidivism (5) prevent suicide (6) increase use of standardized suicide risk screening (7) increase use of standardized suicide prevention training.

3.0 STATEMENT OF MUTUAL BENEFIT AND INTERESTS:

This MOU between [FACILITY] and Centerstone is the result of two SAMHSA funded grants aimed as establishing suicide safer care in the community.

Individuals with a history of suicide or deliberate self-harm are at an increased risk of future suicide regardless of their age. Many studies indicate that suicide risk is particularly high within 90 days of discharge from psychiatric inpatient care or emergency room settings.

Crisis Center follow-up services provide a unique and accessible resource to the community to individuals at-risk of suicide. As services are individualized to the needs of the client, follow-up staff are trained in suicide risk assessment and crisis intervention, thoroughly evaluating suicidal ideation, providing support and guidance, offering referral information, development of and monitoring a robust crisis management plan, along with ongoing means restriction education for the client and family. Additionally, follow-up services have proven to reduce suicidal ideation, decrease feelings of burdensomeness and improve feelings of connectedness.
